

## PROJECT PROPOSAL

# E-Commerce Website Development

*A single-brand e-commerce website designed to showcase products, enable online ordering with secure payments, and give the owner an easy way to manage products, orders, and customers.*

Prepared for

**The Silver Button**

Prepared by

**Rishab Chhetri — Full Stack Developer**

|---------------|-------------------------|
| Proposal Date | 10/07/2026              |
| Proposal No.  | TSB-2026-01             |
| Validity      | 15 days from date above |

## 1. Project Overview

---

This proposal covers the design and development of a complete e-commerce website for The Silver Button. The platform will let customers browse the product catalog, search and filter items, add products to a cart, and check out using an integrated payment gateway. An admin dashboard will let the store owner manage products, track orders, and view customer details — all from one place.

The site will be built mobile-first and fully responsive, so it works cleanly on phones, tablets, and desktops. It will be deployed on Vercel with a free-tier database, keeping running costs close to zero at launch (see Section 6: Hosting & Ongoing Costs for details).

## 2. Scope of Work

---

### 2.1 Customer Website (5–8 pages)

- Home — hero banner, featured/best-selling products, brand story highlight
- Shop — full product listing with categories and filters
- Product Page — images, description, price, variants, add-to-cart
- About — brand story and values
- Contact — enquiry form, store details, social links
- Policies — shipping, returns/refunds, privacy, terms & conditions

### 2.2 Product Catalog

- Category-wise product organization
- Search bar with live/instant results
- Filters — category, price range, availability
- Product sorting (price, newest, popularity)

### 2.3 Shopping Cart & Checkout

- Add to cart / update quantity / remove item
- Cart summary with subtotal, taxes, and shipping (if applicable)
- Guest checkout with shipping address form
- Order confirmation page and email notification

### 2.4 Payment Gateway Integration

- Razorpay or Cashfree integration (client to provide merchant account)
- Card, UPI, netbanking, and wallet support (as enabled by the gateway)
- Secure, PCI-compliant checkout — no card data stored on our server

### 2.5 Admin Dashboard

- Secure admin login
- Product management — add, edit, delete, stock status
- Order management — view, update status, basic order history
- Customer list — view customer details and order history
- Basic sales overview (orders count, revenue snapshot)

### 2.6 Responsive Design

- Fully responsive layout across mobile, tablet, and desktop
- Consistent branding — colors, fonts, and logo placement throughout

### 3. Investment

Total project cost: ₹10,000 (excluding any applicable taxes). Payment is split across three milestones:

| Milestone                                        | Percentage | Amount (INR) |
|--------------------------------------------------|------------|--------------|
| Project Advance (to begin work)                  | 40%        | ₹4,000       |
| Before Deployment (design + core build approved) | 30%        | ₹3,000       |
| After Deployment (site live)                     | 30%        | ₹3,000       |
| Total                                            | 100%       | ₹10,000      |

*Note: Domain name, payment gateway account setup/KYC, and any paid third-party services are arranged and paid for directly by the client.*

### 4. Development Timeline (4 Weeks)

| Phase                     | Duration | Work Description                                               |
|---------------------------|----------|----------------------------------------------------------------|
| Phase 1: Design           | Week 1   | Requirement finalization, page layouts, UI design and approval |
| Phase 2: Core Build       | Week 2   | Catalog, product pages, cart & checkout flow                   |
| Phase 3: Integration      | Week 3   | Payment gateway integration, admin dashboard build             |
| Phase 4: Testing & Launch | Week 4   | Cross-device testing, bug fixing, deployment and handover      |

*Total delivery time: 4 weeks from project advance and receipt of all required content (product images, descriptions, brand assets).*

### 5. Technology Stack

| Component            | Technology                   | Description                                   |
|----------------------|------------------------------|-----------------------------------------------|
| Frontend             | Next.js / React              | Fast, SEO-friendly, responsive storefront     |
| Backend / API        | Next.js API Routes / Node.js | Handles product, cart, and order logic        |
| Database             | MongoDB Atlas (Free Tier)    | Stores products, orders, and customer data    |
| Payments             | Razorpay / Cashfree          | Secure checkout for cards, UPI, netbanking    |
| Hosting / Deployment | Vercel (Free Tier)           | Fast global deployment with automatic scaling |

### 6. Hosting & Ongoing Costs

The platform will be hosted on Vercel with a free-tier database. At this scale, ongoing operational cost is effectively ₹0 per month — Vercel's free tier and the database's free tier comfortably cover a new store's traffic and data needs.

As the store grows — more products, orders, and visitors — usage may eventually cross these free limits. At that point, upgrading to a paid Vercel or database plan may be needed to maintain performance. This is a standard part of scaling and is not something to plan or pay for upfront; it only becomes relevant once the business has meaningfully grown.

- Domain name registration and renewal — client's responsibility
- Payment gateway transaction fees — charged by Razorpay/Cashfree directly, not by the developer
- Any future plan upgrades (hosting/database) — billed directly to the client by the respective provider

## 7. Exclusions & Assumptions

---

1. Domain, hosting account, and payment gateway account are to be created/owned by the client; the developer only configures them.
2. All product content — images, descriptions, pricing, and policy text — is to be provided by the client.
3. This scope covers a single-brand storefront; multi-vendor/marketplace features are not included.
4. Features not listed in Section 2 are considered out of scope and will be quoted separately if required.
5. Timely feedback and approvals from the client are needed to keep the project on schedule.
6. Significant scope changes after work has started may affect both cost and timeline.

## 8. Support & Acceptance

---

### Post-Launch Support

- 30 days of free support after launch, covering bug fixes and minor adjustments
- Guidance provided on using the admin dashboard
- Ongoing/extended support available afterward on a separate maintenance arrangement, if required

### Acceptance Terms

7. Feedback on each phase is expected within 2–3 working days of delivery.
8. No response within this window will be taken as approval to proceed.
9. The project is considered accepted and complete upon successful deployment to production.
10. Changes requested after a phase has been approved will be treated as additional scope.

## 9. Terms & Conditions

---

### Ownership & Code Rights

Full ownership of the website's source code, design files, and content is transferred to the client upon receipt of full and final payment. Until then, all work remains the property of the developer.

### Payment Terms

The project advance is due before work begins. Milestone payments are due within 3 working days of the corresponding milestone being delivered. Work will pause if a payment is overdue by more than 7 days.

### Revisions

Each phase includes up to 2 rounds of revisions within the agreed scope. Additional revisions or requests outside the original scope will be quoted and billed separately.

### Confidentiality

Any business or product information shared by the client for this project will be kept confidential and used solely for the purpose of building and delivering this website.

### Cancellation

Should the client choose to cancel the project mid-way, payment is due for all work completed up to that point; the advance payment is non-refundable once work has begun.

### Liability

The developer will make reasonable efforts to ensure the platform is secure and functions as scoped, but is not liable for losses arising from third-party services (payment gateway, hosting, or database provider) or from misuse of the admin dashboard by the client's staff.

### Governing Law

This agreement is governed by the laws of India, with courts of the client's/developer's mutually agreed jurisdiction having authority over any disputes.

## 10. Contact & Next Steps

---

Ready to move forward? Here's how we begin:

11. Review this proposal and confirm scope and pricing.
12. Make the advance payment (₹4,000) to kick off the project.
13. Work begins within 24 hours of confirmation.
